

JavaScript:

JavaScript

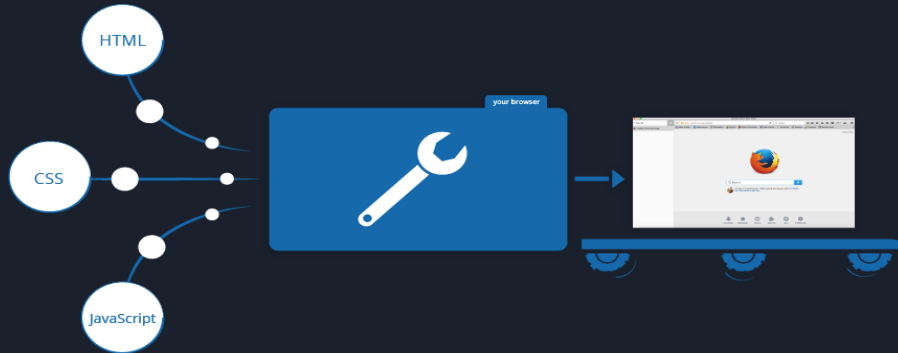

Sommaire:

- Présentation de JavaScript
- Expliquer son fonctionnement
- Les différentes utilisation
- Son Actualité

Fonctionnement:

Le JS est exécuté par le moteur JavaScript du navigateur après que le HTML et le CSS soit assemblés et combinés en une page web.

Cet enchaînement est nécessaire afin que la structure et le style soit déjà mis en place quand le JS commence son exécution

Les différentes utilisation:

FRONT END DEVELOPMENT

JAVASCRIPT
CSS HTML

BACK END DEVELOPMENT

PYTHON PHP
RUBY JAVA GO

Son Actualité:

JavaScript Scholarship Alert – Apply Now!
Black Enterprise
The Black Technology Professionals of New York have alerted me to a fantastic scholarship opportunity that covers up to 100% of the cost of learning **JavaScript**, one of the most used, most essential computer programming languages there is. In an email, Tyrone Terrence McKinney, a senior technology ...

JavaScript to reset a value to previous value if user leave it blank
SitePoint
I'm using devExtreme to make a table of open vehicle maintenance tickets. When I click the edit button it opens up a page where I can edit various fields. One of those fields is the mileage. The problem I'm having is that if the user deletes the mileage and leaves it blank (shouldn't happen, but obviously ...

ImageData causing problems
SitePoint
So my code is almost done. I just have a problem filling in the rectangles in the function detection as the line buffer code keeps resetting the grid using image data. I tried adding a
